Origins (1)     

Origin name	Origin domain	Origin path	Origin type	Origin Shield region	Origin access
project-static-site-99.s3.ap-south-1.a	project-static-site-99.s3.ap-sou...		S3	-	E13N3PUD7ZDD

 **Origin groups: High-availability origin failover** 

Keep your application running even if your primary origin fails. CloudFront automatically switches to your backup origin when your primary origin becomes unavailable or returns error responses, maintaining availability without disrupting users.

Viewer

Viewer protocol policy
 HTTP and HTTPS
 Redirect HTTP to HTTPS
 HTTPS only

Allowed HTTP methods
 GET, HEAD
 GET, HEAD, OPTIONS
 GET, HEAD, OPTIONS, PUT, POST, PATCH, DELETE

Restrict viewer access
If you restrict viewer access, viewers must use CloudFront signed URLs or signed cookies to access your content.
 No
 Yes

Cache key and origin requests
We recommend using a cache policy and origin request policy to control the cache key and origin requests.

Custom cache policies
To customize cache policies, you can create a custom cache key to specify what content to cache and reduce the number of requests to your origin. To enable this feature, upgrade your plan. [Upgrade to Business →](#) X

Cache policy
Choose an existing cache policy or create a new one.
CachingOptimized Recommended for S3 ▾ 
Policy with caching enabled. Supports Gzip and Brotli compression.
[View policy ↗](#)

Origin request policy - optional
Choose an existing origin request policy or create a new one.
AllViewerExceptHostHeader 
Policy to forward all parameters in viewer requests except for the Host header
[View policy ↗](#)

Response headers policy - optional
Choose an existing response headers policy or create a new one.
Select response headers

Block public access (bucket settings)

Edit

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

Block **all** public access

⚠ Off

Bucket policy

Edit

Delete

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. [Learn more](#)
